RE: Site Inspection, L & M General Engineering and Construction, Inc.,
Limestone Quarry, S/053/012, Washington County, Utah,

Date of Inspection: October 16, 1991

Time of Inspection: 9:30 a.m. - 10:00 a.m.

Conditions: Sunny, cool

Participants: Wayne Hedberg, DOGM

The purpose of this inspection was to confirm the status of suspended operations at this mine site. It was apparent that there has been very little change at this site since my last inspection in April, 1990.

The surface disturbance appeared to be the same as what it was on the last inspection. Little change was noted, and I do not believe that there has been any additional ore mined or removed from this site. One change that was noticed involves the removal of the steel powder (explosives) magazine that was previously located just below the active quarry area. The crusher was still onsite, although it was partially dismantled. It's uncertain whether that was for repair, or if it was due to vandalism. The large water tank still remains on top of the highwall above the quarry floor. The plastic water line leading from it down to the crushing area, was also still intact. That was the extent of the onsite mining-related equipment. Overall, the site seemed to be secure both environmentally and from a public health and safety standpoint. There were no visible signs of erosion or other environmental concerns noted.
